Warehousing

DPP: 1

Basics of Datawarehousing

- Q1** What is the primary purpose of a data warehouse ?
(A) Online Transaction Processing
(B) Data Analysis and Reporting
(C) Data Entry
(D) Internet Browsing
- Q2** Which of the following is a characteristic of a data warehouse ?
(A) Volatile (B) Integrated
(C) Transactional (D) Real-time
- Q3** Which of the following is not a component of the data warehousing architecture ?
(A) Data Source
(B) Data Staging
(C) Data Loading
(D) Data Normalization
- Q4** What are measures in a data warehouse ?
(A) Attributes that describe the data
(B) Numerical data that can be aggregated
(C) Textual data for reports
(D) None of the above
- Q5** Which of the following is an example of a measure ?
(A) Customer Name
(B) Sales Amount
(C) Product Category
(D) Store Location
- Q6** What is data cleaning ?
(A) Process of summarizing data
(B) Process of removing inconsistencies and errors
(C) Process of organizing data
(D) Process of entering data
- Q7** Which of the following techniques is used for data smoothing ?
(A) Regression
(B) Clustering
(C) Classification
(D) All of the above

Answer Key

Q1 (B)

Q2 (B)

Q3 (D)

Q4 (B)

Q5 (B)

Hints & Solutions

Q1 Text Solution:

- (a) **Incorrect:** OLTP is not the primary function of a data warehouse.
- (b) **Correct:** Data warehouses are designed for analysis and reporting.
- (c) **Incorrect:** Data entry is not a primary purpose.
- (d) **Incorrect:** Internet browsing is unrelated to data warehousing.

Q2 Text Solution:

- (a) **Incorrect:** Data warehouses are non-volatile.
- (b) **Correct:** Data warehouses integrate data from multiple sources.
- (c) **Incorrect:** They are not designed for transactional processing.
- (d) **Incorrect:** They are usually not real-time; data is periodically updated.

Q3 Text Solution:

- (a) **Incorrect:** Data sources provide the data for the warehouse.
- (b) **Incorrect:** Data staging involves preparing data for the warehouse.
- (c) **Incorrect:** Data loading refers to the process of loading data into the warehouse.
- (d) **Correct:** Data normalization is more related to OLTP databases.

Q4 Text Solution:

- (a) **Incorrect:** Attributes that describe data are dimensions.

(b) **Correct:** Measures are numerical data that can be aggregated.

(c) **Incorrect:** Textual data are usually dimensions.

(d) **Incorrect:** Measures are essential in data warehousing.

Q5 Text Solution:

- (a) **Incorrect:** Customer Name is a dimension.
- (b) **Correct:** Sales Amount is a measure.
- (c) **Incorrect:** Product Category is a dimension.
- (d) **Incorrect:** Store Location is a dimension.

Q6 Text Solution:

- (a) **Incorrect:** Summarizing data is not data cleaning.
- (b) **Correct:** Data cleaning involves removing inconsistencies and errors.
- (c) **Incorrect:** Organizing data is part of data management.
- (d) **Incorrect:** Entering data is a separate process.

Q7 Text Solution:

- (a) **Correct:** Regression is a technique used for data smoothing.
- (b) **Incorrect:** Clustering is used for grouping data.
- (c) **Incorrect:** Classification is used for categorizing data.
- (d) **Incorrect:** Only regression is a smoothing technique.
